### Swing and JOptionPane

Using Graphical User Interface (GUI) Components

# Topics list

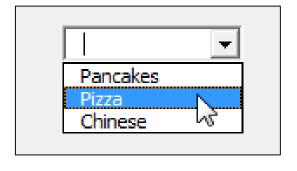

Swing

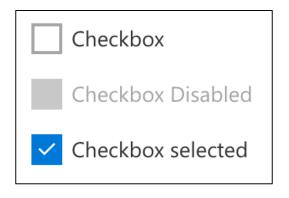

JOptionPane

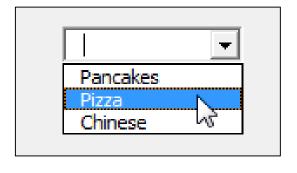

JOptionPane methods

 Swing is a set of program components for Java programmers that allow you to create graphical user interface (GUI) components

In this module, we are only interested in working with dialog/message boxes.

## **Using Swing**

 We make Swing components available to us by importing the Swing components at the start of the program.

import javax.swing.\*;

### **Using Swing**

 We make Swing components available to us by importing the Swing components at the start of the program.

import javax.swing.\*;

However, this imports **all** the Swing components (and there are a lot!)

## **Using Swing**

 We make **Swing** components available to us by importing the Swing components at the start of the program.

import javax.swing.JOptionPane;

As we only plan on using JOptionPane, we can just import that Swing component.

 Having imported JOptionPane from Swing, we can use these methods:

showMessageDialog

showInputDialog

showConfirmDialog

 Having imported JOptionPane from Swing, we can use these methods:

showMessageDialog

Simple message output

showInputDialog

showConfirmDialog

 Having imported JOptionPane from Swing, we can use these methods:

showMessageDialog

Simple message output

showInputDialog

• Allows user to type in (string) input

showConfirmDialog

 Having imported JOptionPane from Swing, we can use these methods:

showMessageDialog

Simple message output

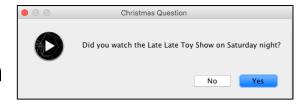

#### showInputDialog

• Allows user to type in (string) input

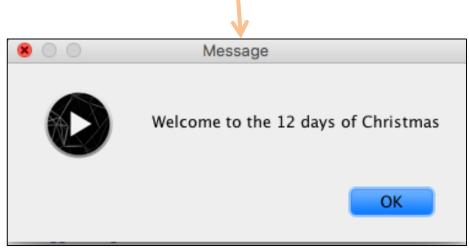

#### showConfirmDialog

Allow the user to choose an option

JOptionPane.showMessageDialog(null, "Welcome to the 12 days of Christmas");

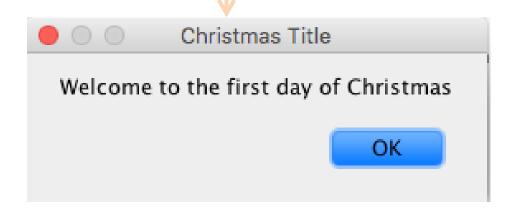

https://docs.oracle.com/javase/tutorial/uiswing/components/dialog.html

Parent Component – for our purposes, null will work as first parameter. JOptionPane.showMessageDialog(null, "Welcome to the 12 days of Christmas"); Text in Dialog box Message Welcome to the 12 days of Christmas

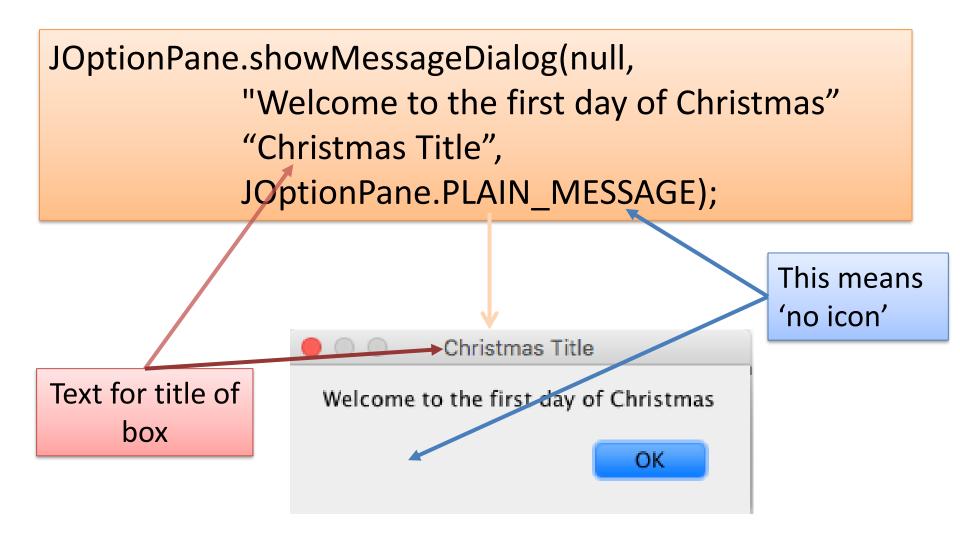

https://docs.oracle.com/javase/tutorial/uiswing/components/dialog.html

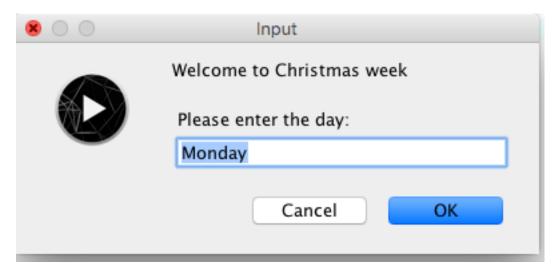

JOptionPane.showMessageDialog(null,
"Welcome to the first day of Christmas"
"Christmas Title",
JOptionPane.PLAIN\_MESSAGE);

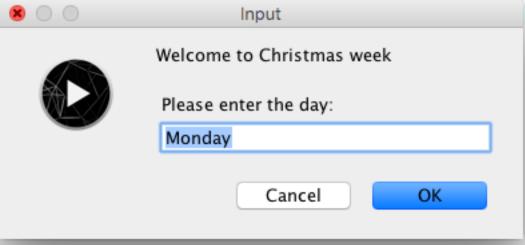

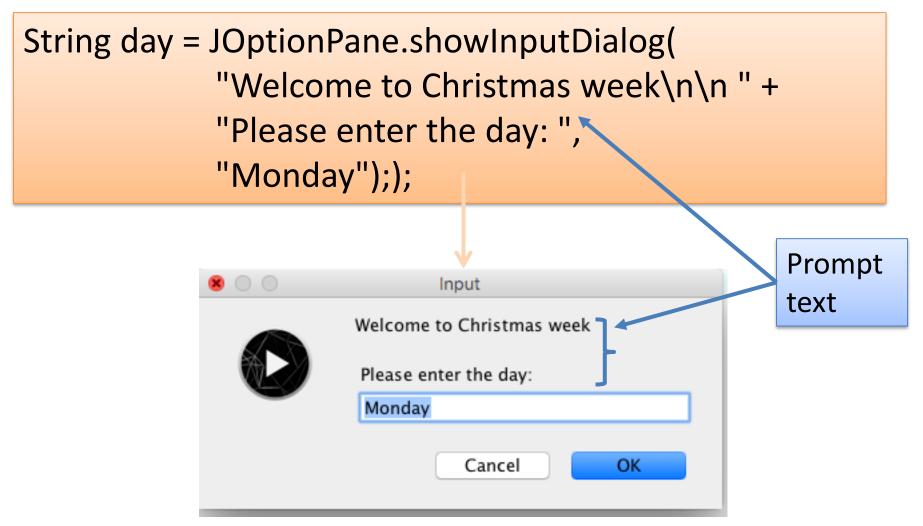

JOptionPane.showMessageDialog(null, "Welcome to the first day of Christmas" "Christmas Title", JOptionPane.PLAIN MESSAGE); This means 'no icon' Christmas Title Welcome to the first day of Christmas OK

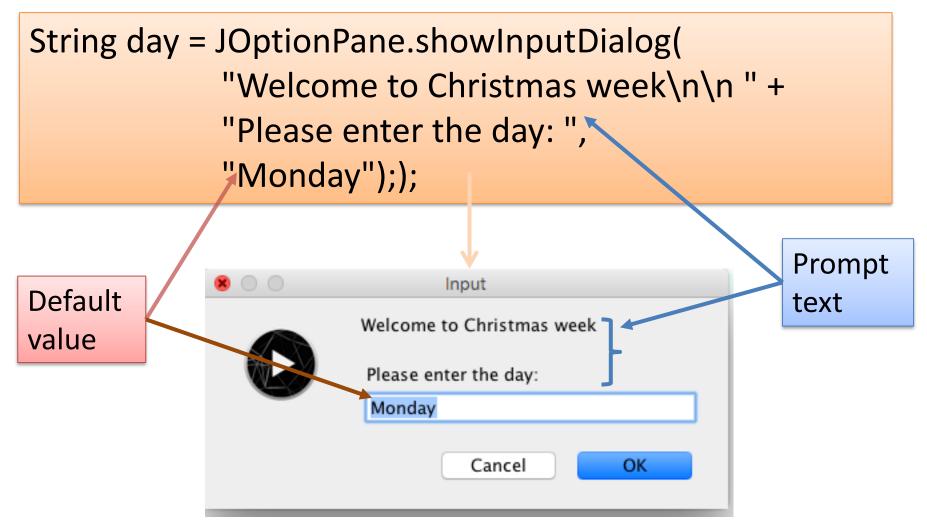

```
String day = JOptionPane.showInputDialog(
    "Welcome to Christmas week\n\n " +
    "Please enter the day: ",
    "Monday"););
```

### Reading in numbers via JOptionPane

#### Problem:

- showInputDialog returns a String
- So if you type 22, it is the string "22", so cannot use it as a number

### Reading in numbers via JOptionPane

#### Problem:

- showInputDialog returns a String
- So if you type 22, it is the string "22", so cannot use it as a number

#### Solution

 Use a predefined method to convert it (or any such string) to a number.

### Reading in numbers via JOptionPane

#### Problem:

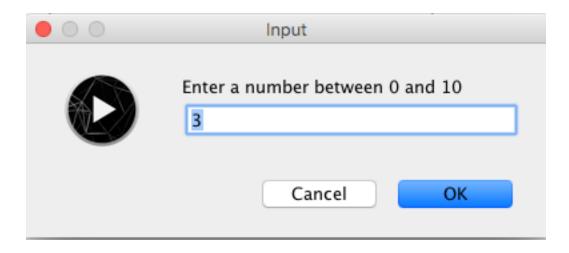

- showInputDialog returns a String
- So if you type 22, it is the string "22", so cannot use it as a number

#### Solution

 Use a predefined method to convert it (or any such string) to a number.

```
Will print the number 25. int number = Integer.parseInt("22"); println (number + 3);
```

# Using parseInt with input

# Using parseInt with input

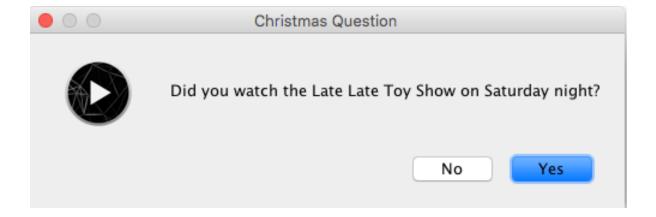

# Using parseInt with input

int num = Integer.parseInt (JOptionPane.showInputDialog( "Enter a number between 0 and 10", "3")); This Input converts Enter a number between 0 and 10 the input String to an Integer and Cancel stores it in

num.

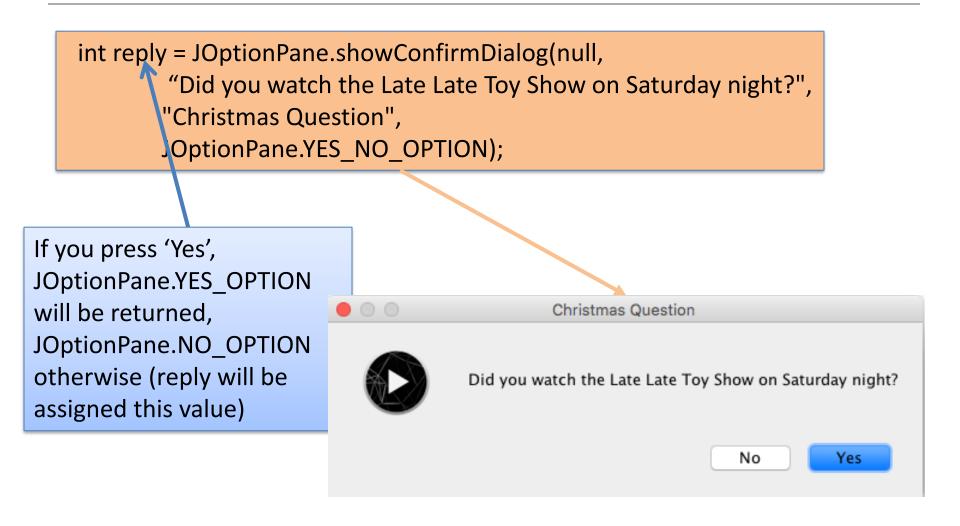

### showConfirmDialog - Using the Yes/No option

### showConfirmDialog - Using the Yes/No option
